- Personal hygiene

Public health on board

Mein Schiff Crew

Public health on board means the maintenance of the following:

- Personal hygiene
- Hand washing procedures
- Food handling and storage
- Equipment handling and storage
- Cleaning and sanitizing
- Chemical usage and storage
- Employee health

The importance of hygiene

The maintenance of hygiene and Public Health practices on-board is vital. Because it is a closed environment, neglecting the procedures can have very serious health consequences and as a result it could potentially damage TUI Cruises reputation.

Public health practices must be in place for the following reason:

- To avoid food borne illnesses
- To avoid the waste of food
- To ensure the guests safety and prevent health-related compensation
- To maintain the highest reputation of TUI Cruises and it's standards
- To ensure that the crew can perform in a safe environment

Types of contamination

These are the main types of contamination

- Biological
- Chemical
- Physical

Food contamination - Chemicals

Chemical contamination is caused by hazardous to health chemicals entering food

Potential hazardous for the Bar are as following:

- Cleaning detergent
- Paints
- Motor fuel
- Lubricants
- Pesticides, herbicides, repellents

Food contamination - Physical

Physical contamination of food occurs when foreign or physical objects enter the food, causing a health hazard or otherwise unhygienic condition.

When the risk of a physical contamination is possible, it is important to inform the Supervisor immediately.

Example of potential physical hazard in the Bar are:

- Nails and bolts
- Plastic pieces
- Broken glass
- Hair
- Cigarette butts

Food contamination – Biological - Animals

Biological contamination of food occurs when the food comes in contact with animals which can carry microorganism. All kind of pests must be reported to the Supervisor immediately.

Potential hazardous for the Bar are:

- Rats and mice
- Cockroaches
- Flies
- Bugs and lice
- Maggots

The different types of Microorganism

Mein Schiff Crew

Bacteria
(Salmonella)

Viruses
(Norovirus)

Yeast
(Saccharomyces rouxii)

Mould / Fungi
(Rhizopus)

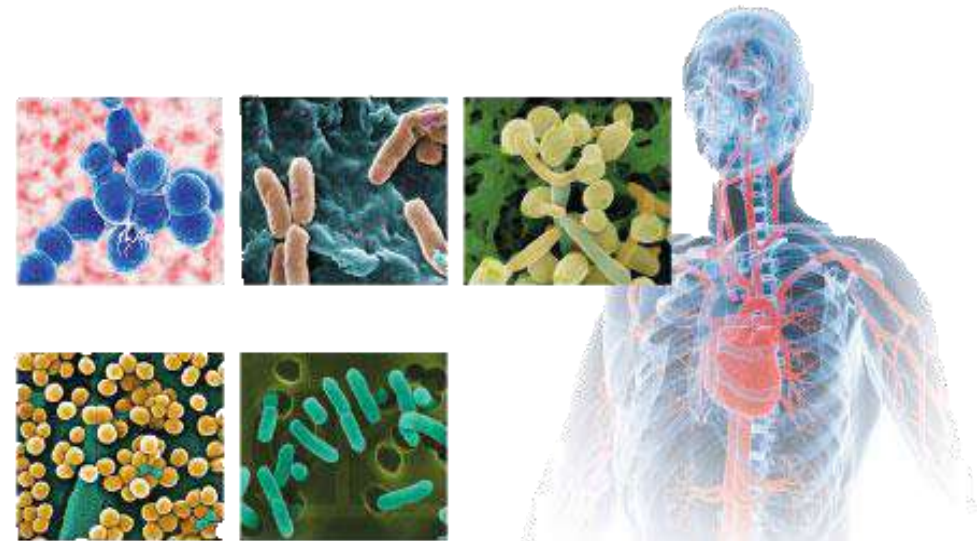

Microorganism

The biggest hazard for food are microorganisms, which cause a biological contamination.

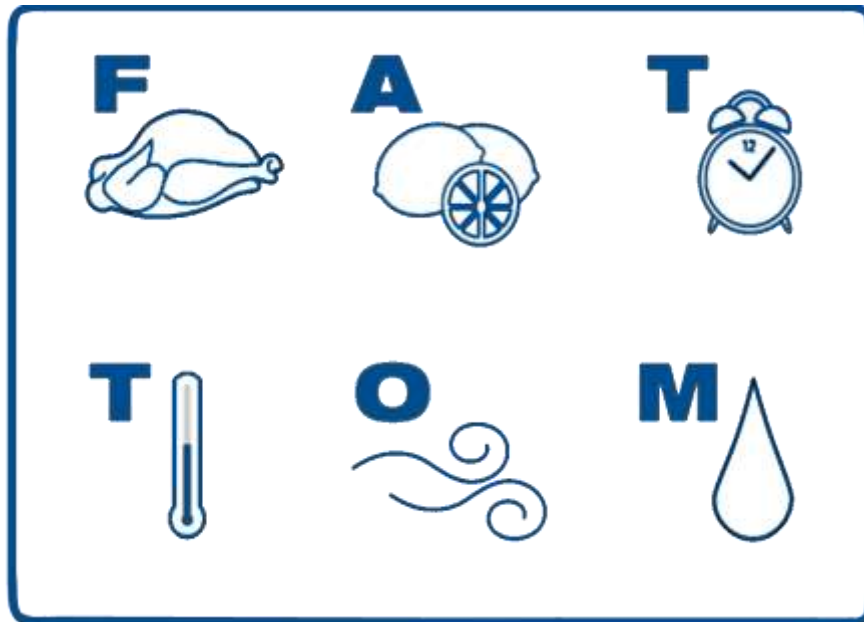

They are not visible with the naked eye but can be extremely dangerous to health. They are very often underestimated.

Once they spread it is extremely difficult to eliminate them from a closed environment. Some samples of very dangerous microorganism:

- Salmonella
- E.coli
- Norovirus
- Listeria monocytogenes
- Covid-19

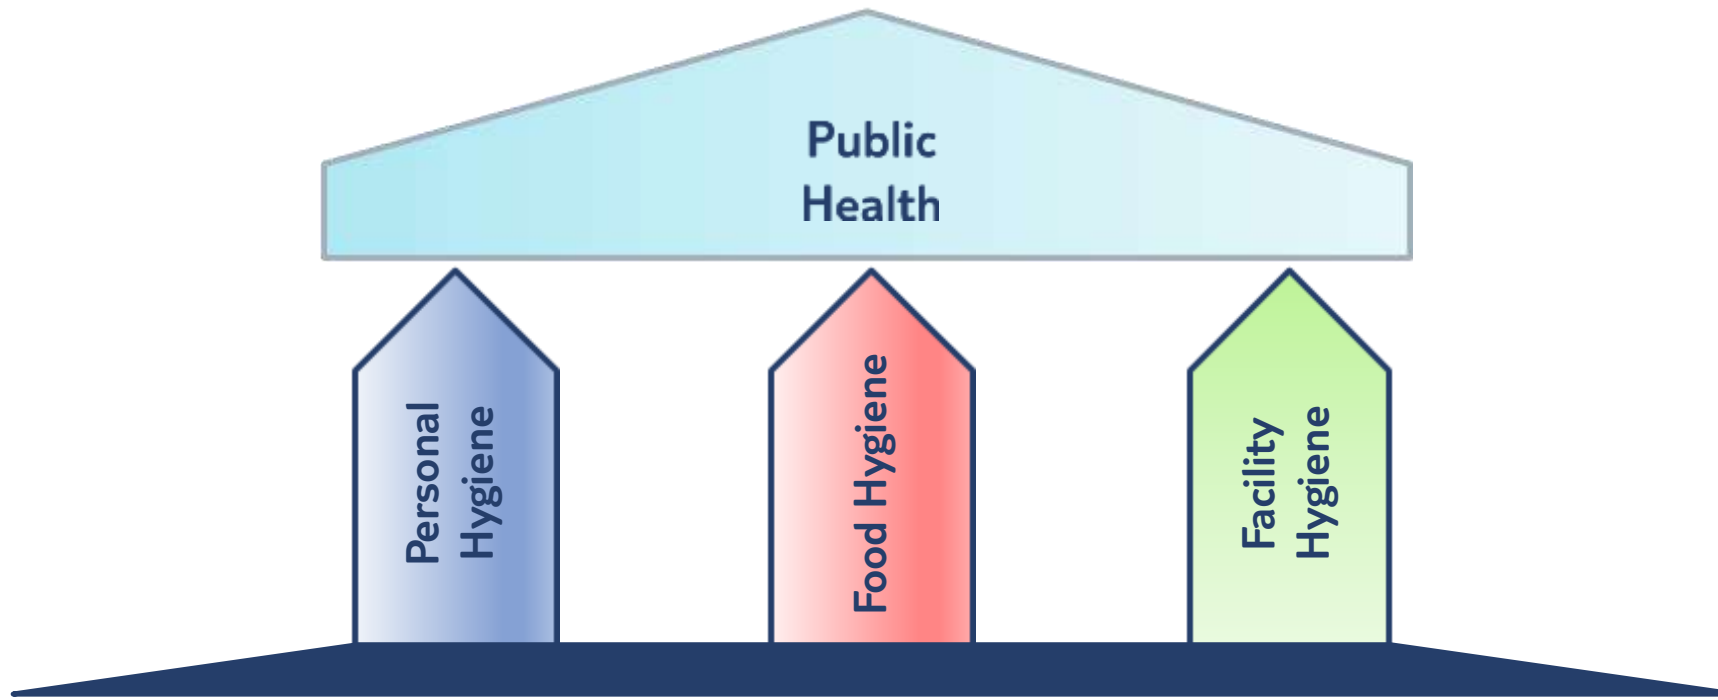

Requirements for growth of microorganisms

Although the conditions vary for many microorganisms, these are the optimal conditions for the growth of hazardous forms. This can be remembered using FATTOM rule:

- Food → Protein, carbohydrate, fat
- Acidity → pH value between 4 and 9
- Time → time for growing
- Temperature → between 10°C and 57°C
- Oxygene → for the metabolism
- Moisture → like every organism on the planet

The Public health system is based on three important pillars. Each of this pillar is essential. Only when we follow all regulations and procedures, we can ensure a safe environment for our guests and crew.

Personal Hygiene

It is of uttermost importance that all crew members maintain the appropriate personal hygiene. This is important not only for food safety, but also as a general standard for the guest service. The standards for personal hygiene for food handlers:

- Daily bathing or showering
- Clean clothing (work cloth must be kept clean, smart and changed at regular intervals)
- Avoiding jewelry
- Not touching face, hair, mouth (when this occur, wash immediately your hands)
- Not drinking, eating or smoking in food and beverage preparation / service areas
- Wearing an approved uniform
- Keeping your nails short and clean

Personal Hygiene – Hand washing

Hands should be washed in the following circumstances:

- When first entering the food preparation / service areas
- After coming back from a break
- After going to the toilet
- After coughing, sneezing, using a handkerchief or disposable tissue
- After handling soiled equipment or utensils
- After handling cleaning materials – mops, buckets etc.
- During food preparation as often as necessary to remove soil and contamination and to prevent cross contamination when changing tasks
- After every other activities that might contaminate the hands

Personal Hygiene – Disposable gloves

Disposable gloves must be worn:

- During handling of cooked or ready to eat food
- When handling PHF (Potential hazardous food)
- When taking ice out of the ice machine
- By all persons on service lines which handle food in the view of the passengers
- For cutlery polishing

Disposable gloves must be discarded or changed:

- When touching a garbage bin or garbage
- Before leaving the workplace
- When touching anything that might contaminate the next food item or clean equipment
- When they are broken

Any questions?

Questions

1. What is on board a part of the public health system
 - a) On board revenue
 - b) Personal hygiene
 - c) Safety drills
 - d) Time sheet

2. Why hygiene is so important
 - a) To make the life easier
 - b) To make the crew happy
 - c) To satisfy our guests
 - d) To avoid food borne illnesses

3. What is a chemical food contamination
 - a) Contamination with glas pieces
 - b) Contamination with bacterias
 - c) Contamination with spieces
 - d) Contamination with cleaning detergents

Questions

4. What is one of the basic requirements for Hygiene
- a) To start the duty always in time
 - b) Be smart to the colleagues
 - c) Not drinking, eating or smoking in food and beverage preparation / service areas
 - d) Never discuss with the Supervisor
5. When it is important to wash the hands
- a) Always when entering the food preparation / Service areas
 - b) After the operation
 - c) Before speaking to the guests
 - d) Before going to the doctor
6. When gloves are necessary to wear
- a) During lunch in the crew mess
 - b) After leaving the garbage area
 - c) During transportation of food or clean equipment
 - d) During handling of cooked or ready to eat food
- 

Thank you very much for
your attention.
